

# Wetland Restoration Catalog

*December 2008*

Virginia Department of Conservation and Recreation –  
Division of Natural Heritage

**Virginia Coastal Zone**  
MANAGEMENT PROGRAM

This project was funded in part by the Virginia Coastal Zone Management Program at the Department of Environmental Quality through Grant #NA08NOS4190466 Task 7 of the U.S. Department of Commerce, National Oceanic and Atmospheric Administration, under the Coastal Zone Management Act of 1972, as amended.

The views expressed herein are those of the authors and do not necessarily reflect the views of the U.S. Department of Commerce, NOAA, or any of its subagencies.

**Virginia Department of Conservation and Recreation**  
**Division of Natural Heritage**  
**Wetland Restoration Catalog**  
**Updated December 2008**

DCR-DNH has developed a catalog of potential wetland restoration sites, within or adjacent to Natural Heritage Conservation Sites. This catalog is intended to guide localities and regulatory agencies to appropriate sites for various conservation purposes including wetland mitigation.

These prior-converted wetland patches occur on a mix of private and public lands and property information has not been referenced. The wetland restoration opportunities have not been field verified. Additional property research and site evaluation will be necessary to determine which areas are suitable candidates for restoration. Nevertheless these sites represent high-probability opportunities to design and implement high-value wetland restoration projects. Because these sites fall within sensitive biological conservation sites, DCR requests coordination for any proposed mitigation actions. Please contact the project review coordinator at 804-371-2708 or [rene.hypes@dcr.virginia.gov](mailto:rene.hypes@dcr.virginia.gov)

## **Methodology**

Conservation sites are tools for representing key areas of the landscape that warrant further review for possible conservation action because of the natural heritage resources and habitat they support. Conservation sites are polygons built around one or more rare plant, animal, or natural community designed to include the element and, where possible, its associated habitat, and buffer or other adjacent land thought necessary for the element's conservation. Conservation sites are given a biodiversity significance ranking based on the rarity, quality, and number of element occurrences they contain; on a scale of 1-5, 1 being most significant.

- B1 - Outstanding significance
- B2 - Very high significance
- B3 - High significance
- B4 - Moderate significance
- B5 - of General Biodiversity significance

Natural Heritage Conservation sites larger than 500 acres with a biodiversity rank of B1 (outstanding significance), B2 (very high significance) and B3 (high significance) were selected. The original (2006) potential wetland restoration sites were selected by Chief Biologist, J. Christopher Ludwig who reviewed each conservation site against 2002 Virginia Basemap aerial photography, National Wetland Inventory wetland coverage, and other GIS datasets. Chris has visited many of these sites and used his personal experience, as well as his photo-interpretation skills, to delineate patches of land that appeared to be converted wetlands with a high potential for restoration. Polygons were delineated in an ArcView shapefile. In most cases these polygons terminated at the edge of a conservation site even if the converted area seemed to extend over the conservation site boundary.

Natural Heritage recently incorporated the 2006/2007 aerial photography into the Division's database. The availability of these updated photographs allowed for an opportunity to update the original Wetland Restoration Catalog. All 121 of the original potential wetland restoration sites were viewed

against the most current aerial photography. Each original site was also reviewed to confirm if the site was still within a B1 through B3 conservation site of over 500 acres. Then, additional potential wetland restoration sites were selected using the methodology described above. Many of the original sites were modified to extend past the conservation site boundary if the converted area continued past this boundary. All new and modified potential wetland restoration sites were reviewed by Chief Biologist, J. Christopher Ludwig before being incorporated into the catalog.

New and updated information is continually added to the Natural Heritage database. The information within this document is current as of December 2008.

## Updates

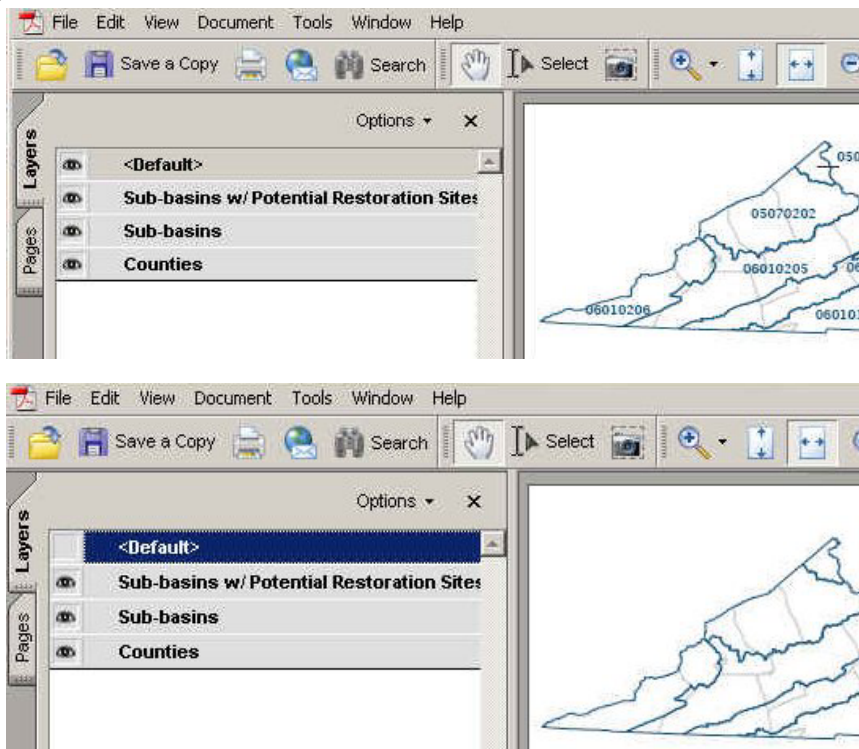

The 2008 Wetland Restoration Catalog contains 10 B1, 84 B2, and 24 B3 potential restoration sites. 92 of the 118 sites are located within the coastal zone. Sites range in size from 1.3 acres to 2484.3 acres. Please see the table below for a full description of the updates.

<b>35 of the 2006 Catalog's 121 potential wetland restoration sites were deleted. Of these:</b>
<b>3</b> sites were combined into larger sites
<b>13</b> sites were deleted due to changes in land use (development or forestation) as determined by the difference between 2002 and 2006/2007 aerial photography
<b>16</b> sites were deleted due to changes in the B-rank of the conservation site (decrease in biodiversity rank)

<b>The updated catalog has 118 potential wetland restoration sites. Of these:</b>
<b>55</b> sites are modifications of previously selected sites (based on slight changes of conservation sites or to better fit to the current land uses)
<b>32</b> sites are new - mainly due to updated conservation site data (increase in ranks or extensions of boundaries)
<b>31</b> of the sites in the updated catalog are the same as in the 2006 catalog

**Figure 1.**

On the following page is an interactive PDF map layer showing coastal zone counties (highlighted in yellow), sub-basins and sub-basins with potential wetland restoration sites. You can turn each of these layers on and off interactively by clicking the Layers Tab in Adobe Reader document, then clicking on the eye graphic beside each layername. The default layer is the sub-basin labels. See figure 1 for a demonstration. The top graphic shows all layers turned on. In the second, the Default layer, sub-basin labels, has been turned off.

## Potential Wetland Restoration Sites

The following table lists the potential wetland restoration sites, by sub-basin code. Click on the hyperlink associated with each Site ID number to see a map showing the location of the sites.

Site ID	B-Rank	Conservation Site Name	Acres	Coastal	HUC Code	County/City	USGS Quad Name
